Agenda

- Planning in Traditional Software Development
- Planning in Agile Development
- Estimation in Agile Development
 - Story Points, Ideal/Elapsed Time
 - Velocity
- Tracking Project Progress
 - Burndown charts, Velocity Charts
- Tools for tracking progress
 - JIRA Agile

Plan-and-Document Software Methodologies

- Typical phases in traditional software development methodologies

Plan-and-Document Software Methodologies

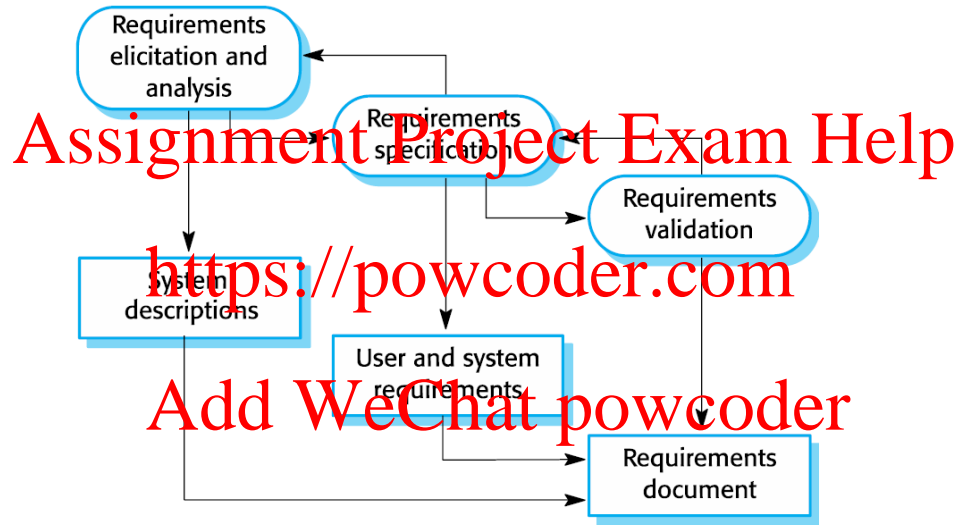

- Goal is to make Software Engineering predicable in budget and schedule
 - Requirements elicitation
 - Requirements documentation
 - Cost estimation
 - Scheduling and monitoring schedule
 - Change management for requirements, cost and schedule
 - Ensuring implementation matches requirement features
 - Risk analysis and management

Plan-and-Document – Requirements Engineering Process

Requirements Documentation

- Software Requirements Specifications (SRS) process
 - 100s of pages, IEEE 830-1998 standard recommended practice for SRS
- Stakeholders to read SRS document, build basic prototype, or generate test cases to check:
 - Validity: are all requirements necessary?
 - Consistency: do requirements conflict?
 - Completeness: are all requirements and constraints included?
 - Feasibility: can requirements be implemented?
- Estimate budget and schedule based on the SRS

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Why Software Projects Fail?

- **Over-budget, over-time**
- Hard to maintain and evolve

Assignment Project Exam Help

- Useless (unwanted) product features
 - Standish group's CHAOS report:
 - 45% of features never used, 19% rarely used
 - Development teams would build software, and throw it over the wall to their users, and hope some of what they build would stick
 - Developers believe that software work exactly the way they intended it to work and users need to change their expectation to use it

Planning in Agile Software Development

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Agile Manifesto – Planning

- “We are uncovering better ways of developing software by doing it and helping others do it. Through this work we have come to value”

- Individuals and interactions over processes and tools
- Working software over comprehensive documentation
- Customer collaboration over contract negotiation
- Responding to change over following a plan

- The items on the left are more valued than those at the right

Agile Principles – Planning and Estimation?

Discuss - which Principles relate to planning and estimation in Agile Software Development ?

1. Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.	5. Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.	9. Continuous attention to technical excellence and good design enhances agility.
2. Welcome changing requirements, even late in development. Agile processes harness change for the customer's competitive advantage.	6. The most efficient and effective method of conveying information to and within a development team is face-to-face conversation.	10. Simplicity--the art of maximizing the amount of work not done--is essential.
3. Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.	7. Working software is the primary measure of progress.	11. The best architectures, requirements, and designs emerge from <i>self-organizing teams</i> .
4. Business people and developers must work together daily throughout the project.	8. Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.	12. At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.

Agile Principles – Relation to Planning?

1. Our highest priority is to satisfy the customer through early and continuous delivery of valuable software.	5. Build projects around motivated individuals. Give them the environment and support they need, and trust them to get the job done.	9. Continuous attention to technical excellence and good design enhances agility.
2. <i>Welcome changing requirements, even late in development.</i> Agile processes harness change for the customer's competitive advantage.	6. The most efficient and effective method of conveying information to and within a development team is face-to-face conversation.	10. <i>Simplicity--the art of maximizing the amount of work not done--is essential.</i>
3. Deliver working software frequently, from a couple of weeks to a couple of months, with a preference to the shorter timescale.	7. Working software is the primary measure of progress.	11. The best architectures, requirements, and designs emerge from self-organizing teams.
4. Businesspeople and developers must work together daily throughout the project.	8. Agile processes promote sustainable development. The sponsors, developers, and users should be able to maintain a constant pace indefinitely.	12. At regular intervals, the team reflects on how to become more effective, then tunes and adjusts its behavior accordingly.

Planning in Software Development

- **Plan-driven (plan-and-document or heavy-weight)**
 - All of the process activities are planned in advance and progress is measured against this plan
 - Plan drives everything and change is expensive
- **Agile processes (light-weight)**
 - Planning is incremental and continual as the software is developed
 - Easier to change to reflect changing requirements

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Requirements in Agile Software Development

- Requirements are also *crucial for planning* in Agile development
- Work continuously and closely with stakeholders to develop requirements and tests
- Iterative development
 - Short iterations 2-4 weeks each focused on core features
 - Maintain working prototype while adding new features
 - Check with stakeholders what's next to validate building the right software (verification)
 - Initial planning and estimation and adapt during development

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Requirements in Agile Development

- User stories (and tasks) and condition of satisfaction

Nominate a video for an achievement
As a returning user with a large friends list, I want to nominate one friend's video for an achievement so that all of our mutual friends can vote to give him a star.

Nominate a video for an achievement
As a returning user with a large friends list, I want to nominate one friend's video for an achievement so that all of our mutual friends can vote to give him a star.

Modify database schema to
add achievement table and
stored procedures

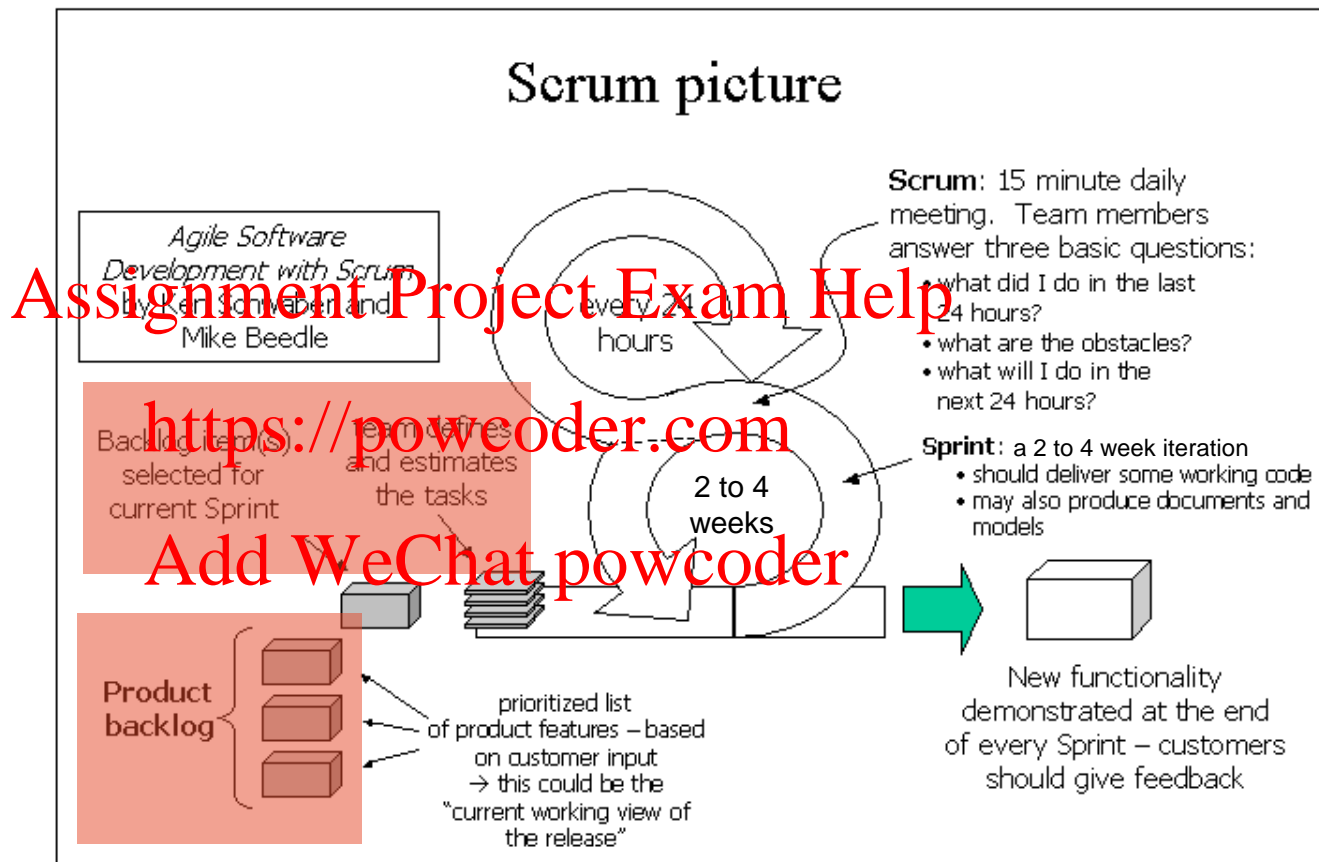

Create front end web
pages for editing and
displaying achievements

Add service calls to API
for adding, updating,
removing, finding
achievements

Nominate a video for an achievement
Conditions of satisfaction
* A user can nominate a video for an achievement
* A user's friend is notified when his video gets an achievement
* A user can see all of the videos his friends have nominated
* A video with an achievement is displayed with a star next to it

Scrum – Planning

Could planning be changed during development?

Scrum – Team Structure

Which team organization better describes the Scrum Sprint/iteration planning?

Agile Methods for Estimating Size

Story points and Ideal Days

Assignment Project Exam Help

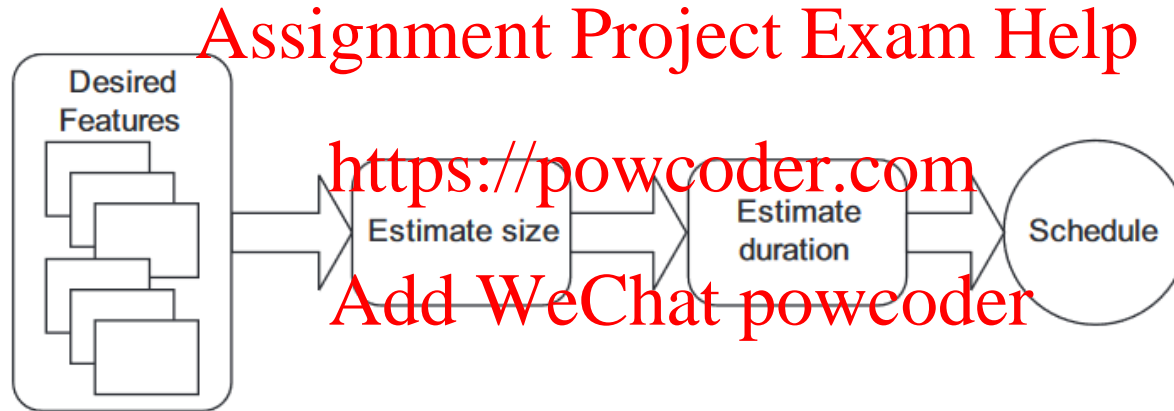

<https://powcoder.com>

Add WeChat powcoder

Estimating Size in Agile Development

- Agile teams separate estimates of size from estimates of duration

Estimating the duration of a project begins with estimating its size.

Estimation – Story Points

- Metric for the overall size of a user story, feature, or other piece of work
- A point value to each item is assigned
- No. of **story points** \sim the overall size of the story
- Estimation scale:
 - Fibonacci series; 1, 2, 3, 5, 8, ...
 - Subsequent number as twice the number that precedes it: 1, 2, 4, 8, ...
- Why?
 - Measure of the user story only
 - No emotional measurements
 - Team velocity is considered
 - Team members focus on solving problems based on difficulty not time spent

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Estimation – Staring Story Points

- Two approaches:
 - Smallest story (expected) is estimated at 1 story point
 - Medium-sized story assigned a number somewhere in the middle of the range you expect to use
- Estimating in story points completely separates the estimation of effort from the estimation of duration

Sprint Planning Session using Story Points

- Start with the most valuable user stories from the product backlog
- Take a story in that list, ideally the smallest one
- Discuss with the team whether that estimate is accurate
- Keep going through the stories until the team have accumulated enough points to fill the Sprint

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Why Story Points Work?

- Simple, not magic
- The team is in control of them
- They get your team talking about estimates
- Developer's are not scared of them
- They help the team discover exactly what a story means
- They help everyone on the team become genuinely committed

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Ideal Days vs Elapsed Days

- **Ideal time** and **elapsed time** are different
 - American football game is 60 minutes; however 3 or more hours will typically pass on a clock before a 60 minutes game is finished

Assignment Project Exam Help

<https://powcoder.com>

- Time to do a development task without any interruptions is?

Add WeChat powcoder

- Time to do a development task with work interruptions is?

Estimating in Ideal Days

- Ideal days
 - The amount of time a user story will take to develop
- Elapsed days
 - Requires considering all of the interruptions that might occur while working on a user story
- Ideal days only is an estimate of size

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Estimating in Ideal Days

- Associate a single estimate with each user story
- Not in four programmer days, two tester days, and three product owner days, etc
- Express the estimate as a whole (i.e., nine ideal days)

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Estimation Techniques

- Expert opinion (estimates based on opinion)
- Analogy: compare with other stories
- Disaggregation: splitting a story into smaller tasks
- Planning Poker: based on expert opinion, analogy, disaggregation and fun

Planning Poker

- Gamified technique to estimate effort/relative size of development in Agile development

Assignment Project Exam Help

- The best way I've found for agile teams to estimate is by playing planning poker (Grenning 2002).

<https://powcoder.com>

Add WeChat powcoder

Agile Estimating and Planning: Planning Poker - Mike Cohn

<https://www.youtube.com/watch?v=MrlZMuvjTws>

Planning Poker

- Aims to avoid individual influence/bias (think independently)
- Team discussion with medication to consider different views
- Team involvement in planning increases commitment
- It combines expert opinion, analogy, and disaggregation into an enjoyable approach to estimating that results in quick but reliable estimates

Considering Story Points over Ideal Days

- Story points help drive cross-functional behavior
- Story points are a pure measure of size
- Estimating in story points is typically faster
- My ideal days are not your ideal days

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Re-Estimating

- Story points and ideal days helps you know when to re-estimate
- Re-estimate only when your opinion of the relative size of one or more stories has changed
- Do not re-estimate solely because progress is not coming as rapidly you as you'd expected
- Let velocity take care of most estimation inaccuracies

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Considering Ideal Days over Story Points

- Ideal days are easier to explain outside the team
- Ideal days are easier to estimate at first
- Ideal days make velocity predictions easier

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Velocity

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Estimation – Velocity

- A measure of a team's rate of progress
- Sum the number of story points assigned to each user story that the team completed during the iteration
<https://powcoder.com>
- Example:
 - A team completed 3 stories, 5 SPs each → velocity = 15

Estimation – of Number of Iterations

- Size estimate of the project: sum the SP estimates for all desired features
- Divide size by velocity to arrive at an estimated number of iterations

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Velocity, Duration and Schedule – Exercise

- Sum of all user stories is 100 SPs
- Team's velocity, based on past experience, is 11 SP per two-week iteration
- Work out the following estimates:
 - How many iterations?
 - Estimate of duration is?
 - Project schedule?

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Velocity, Duration and Schedule – Example

- 100 SPs
- Team's velocity 11 SP per two-week iteration
- 9.1 iterations (either 10 iterations or find one point to remove)
 - Let's assume we go with 10 iterations
- 1 iteration = 2 weeks → estimate of duration is 20 weeks
- Count forward 20 weeks on the calendar and that becomes our schedule

Estimating Velocity

- Use Historical values

- Run an iteration/Sprint

- Make a forecast

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Consideration for Historical Values

- Is the technology the same?
- Is the domain the same?
- Is the team the same?
- Is the product owner the same?
- Are the tools the same?
- Is the working environment the same?
- Were the estimates made by the same people

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Run an Iteration

- Run an iteration (or two or three) and then estimate velocity from the observed velocity during the one to three iterations

<https://powcoder.com>

Add WeChat powcoder

Velocity – Forecasting

- Estimate the number of hours that each person will be available to work on the project each day.

Assignment Project Exam Help

- Determine the total number of hours that will be spent on the project during the iteration.

<https://powcoder.com>

- Somewhat randomly select stories and expand them into their basic tasks. Repeat until you have identified enough tasks to fill the number of hours in the iteration.

- Convert the velocity determined in the prior step into a range.

Velocity – Planning and Estimation

- Inconsistent velocity over long time
 - Hidden challenges not counted?
 - Outside business/stakeholders' pressure?
- Observe team velocity throughout the Sprints and investigate decrease in average velocity (e.g., inefficiency)
 - Discuss in the retrospective meetings

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

Tracking Project Progress

Assignment Project Exam Help

<https://powcoder.com>

Burndown chart, The Task board

Add WeChat powcoder

Burndown Charts

- Tracks the completion of development work throughout the Sprint; how a Sprint is progressing at glance

Assignment Project Exam Help

- Should be visible to everyone in the team (e.g., whiteboard, wall chart, online tool)

<https://powcoder.com>

- First half of the Sprint planning
 - Story points and velocity to figure out what will go into the Sprint

Add WeChat powcoder

- Good estimation and planning should help the team to burn stories relatively with similar pace

Burndown Charts based on Story Points

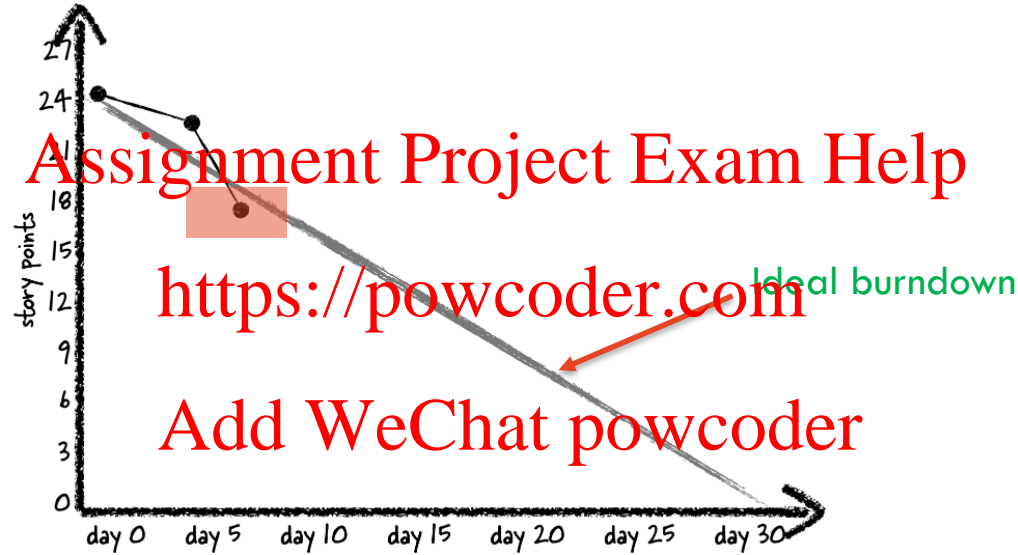

- x-axis: first and end dates of the sprint
- y-axis: story points (0 to 20% more than the total no. of points in the Sprint)
- The plot: a user story is “Done”, plot the number of points left in the sprint, at the current day
 - Fill in more days in the chart as more stories are finished
- More work needs to be added (discovered during daily scrum)
 - Estimate amount of points to remove to balance out the Sprint
 - Add card(s) to the task board, follow-up team meeting to estimate added work
 - Add notes to the chart
- As you get close to the end of the Sprint, more points burn off the chart

Burndown Charts

- Burndown chart when the Sprint starts

Burndown Charts based on Story Points (1)

Two stories worth 7 points burned off

Burndown Charts based on Story Points (2)

Burndown Charts based on Story Points (3)

Assignment Project Exam Help

<https://powcoder.com>

Add WeChat powcoder

A gap between the burndown chart and the guideline tells you that there's a good chance you won't finish all of the stories by the end of the sprint.

Tool Support for Agile SW Development

- Jira agile is a software tool for planning, tracking and managing software development projects
 - Supports different agile methodologies including Scrum and Kanban
- Jira Software supports Scrum Sprint planning, stand ups (daily scrums), Sprints and retrospectives
 - Including backlog management project and issue tracking, agile reporting
 - E.g., Burndown and velocity charts, Sprint report
 - Scrum boards visualize all the work in a given Sprint
- Agile plugins such as GreenHopper, Agile Methods and Reports.
